DETAILED ACTION

Allowable Subject Matter

1. Claims 1-47 are allowed.
2. The following is an examiner's statement of reasons for allowance: Examiner agrees with Applicant that Agarwal et al. (U.S. Patent No. 5,887,183), the closest reference, and the other prior art do not teach or fairly suggest:

a multi-precision execution unit coupled to the data path, the multi-precision execution unit configurable to dynamically partition data received from the data path to account for an elemental width of the data wherein the elemental width of the data is equal to or narrower than the data path, the multi-precision execution unit being capable of performing group floating-point operations on multiple operands in partitioned fields of operand registers and returning catenated results (in claim 1);

the execution unit partitioning data received from the data path and stored in an operand register based on the elemental

width specified in the instruction into a plurality of operands stored in partitioned fields of the operand register, and performing the floating-point arithmetic operation on each of the plurality of operands to produce a plurality of individual results (in claim 35); and

data in an operand register be partitioned into a variable number of data elements based on a elemental width, specified on an instruction-by-instruction basis, and that such partitioned data elements are used in group floating-point operations to produce the same number of results (as descried in claim 42).

Further, the combination of the above limitations with all of the other limitations in the respective independent claims is not obvious.

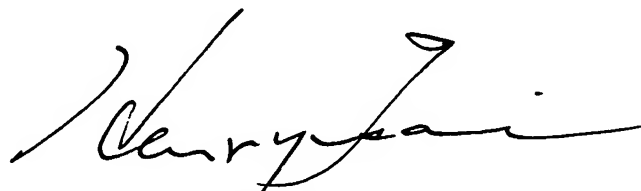

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
